* Within 28 days of delivery, less p&p

FAQ: –

- Why is my lounge the coldest room in the house?
- Why is my house so draughty?
- Why is my back cold when I'm sat in front of my fire?
- Why is it my heating is always on, but I never feel warm?
- Why does my room drop cold as soon as I turn my fire off?

The answer is **“YOUR CHIMNEY”**

Background

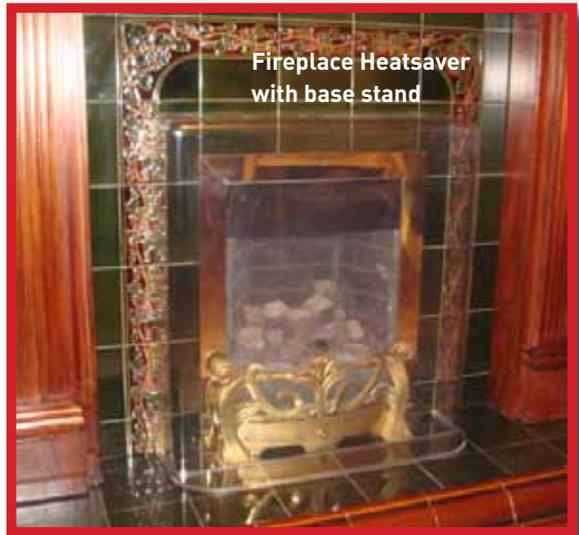

Most houses are built with a chimney, which is designed to draw the smoke and fumes out of the house when the fire is burning.

Even when the fire is off the chimney continues this vital role. It acts like a vacuum drawing warm air up and out into the atmosphere continuously day and night. It can empty the average size room in under an hour, resulting in cold draughts, a colder home and higher heating bills.

The up draught increases when the fire is on, in some cases it can empty the average room within 9 minutes, as well as up to 80% of the heat from the fire escaping straight up the chimney.

Stopping this draught will make your home warmer, more comfortable.

The simple, easy and cost effective solution is to install the **Fireplace Heatsaver.**

Performance

Extensive testing by the leading test house BSRIA has proven that the Fireplace Heatsaver saves: - energy, fuel bills, carbon & reduces draughts.

Full testing report can be downloaded from our website
www.fireplaceheatsaver.co.uk

The Fireplace Heatsaver

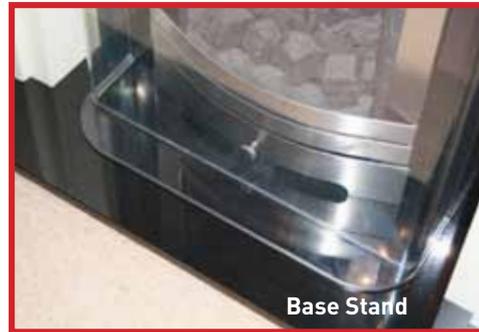

The Fireplace Heatsaver is a lightweight, transparent shield designed to fit over the majority of fires.

These include Inset Live Fuel Effect gas fires and standard open fireplaces burning gas, wood or coal, but excluding fires with back-boilers or stoves.

Easy to fit

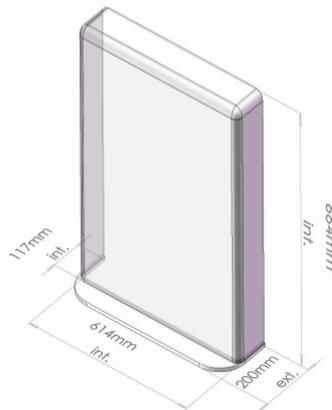

The Fireplace Heatsaver fits quickly and easily in seconds without the need for any tools or DIY skills.

Simply insert Fireplace Heatsaver into the base stand & position centrally over the fire.

Fireplace Heatsaver

	Internal
Depth	117mm
Width	614mm
Height	664mm
